KEY SCHEME FEATURES

Scheme Name	DHFL PRAMERICA LARGE CAP FUND			
Investment Objective	The Investment objective of the Scheme is to generate long term capital growth from a diversified portfolio of equity and equity related securities of companies registered in, and/or listed on a regulated market of India. The Scheme will invest in companies across a range of market capitalisations with a preference for medium and large companies. The investment objective is to generate long-term capital growth from an actively managed portfolio of equity and equity related securities. However there can be no assurance that the Scheme objective can be realized.			
Asset Allocation Pattern of the scheme	Instruments	Indicative allocations (% of total assets)		Risk Profile**
		Minimum	Maximum	
	Equities & Equity related securities	80%	100%	Medium to High
	Debt Securities & Money Market Instruments (including cash and money at call)	0%	20%	Low to Medium
** Risk profile refers to the price risk of the respective asset class. Please refer risk factors for more details.				
The Scheme will not invest in foreign securitised debt.				
If the Scheme decides to invest in securitised debt, it is the intention of the Investment Manager that such investments will not, normally exceed 10% of the corpus of the plan and if the Scheme decides to invest in foreign debt securities, it is the intention of the Investment Manager that such investments will not, normally exceed 10% of the assets of the Scheme. The Investment Manager may review the above pattern of investments based on views on the equity markets and asset liability management needs. However, at all times the portfolio will adhere to the overall investment objective of the Scheme. Investors may note that securities that provide higher returns typically display higher volatility. Accordingly, the investment portfolio of the Scheme would reflect moderate to high volatility in its equity and equity related investments and low to moderate volatility in its debt and money market investments. The Scheme will invest in derivatives only for the purpose of hedging and portfolio balancing, as permitted under the Regulations and guidelines and the exposure to derivatives shall be restricted to 50% of the net assets of the Scheme.				
Risk Profile of the scheme	Mutual Fund Units involve investment risks including the possible loss of principal. Please read the Combined Scheme Information Document carefully for details on risk factors before investment. Please refer to the Asset Allocation Pattern for Scheme Specific Risk Factors.			
Investment Strategy	The aim of the DPLCF is to deliver above benchmark returns with due regard to capital conservation by providing long-term capital growth from an actively managed portfolio, mainly comprising companies registered in and/or listed on a regulated market of India. Income is not a primary consideration in the investment policies of the DPLCF. The Scheme will invest across a range of market capitalisations with a preference for medium and large companies. A top down and bottom up approach will be used to invest in equity and equity related instruments. Investments will be pursued in selected sectors based on the Investment team's analysis of business cycles, regulatory reforms, competitive advantage etc. Selective stock picking will be done from these sectors. The fund manager in selecting scrips will focus on the fundamentals of the business, the industry structure, the quality of management, sensitivity to economic factors, the financial strength of the company and the key earnings drivers. Since investing requires disciplined risk management, the AMC would incorporate adequate safeguards for controlling risks in the portfolio construction process. Stock specific risk will be minimized by investing only in those companies that have been analyzed by the Investment team at the AMC. Risk will also be reduced through adequate diversification of the portfolio. Diversification will be achieved by spreading the investments over a range of industries/sectors. The Scheme may however, invest in unlisted and/or privately placed securities subject to the limits indicated under "Investment Restrictions for the Scheme(s)" from issuers of repute and sound financial standing. If investment is made in unlisted securities, the approval of the Investment Review Committee (constituted by the Board of the AMC) shall be obtained, as per the Regulations and within the broad parameters approved by the Board of the AMC. As per the asset allocation pattern indicated above, for investment in debt securities and money market instruments, the Fund may invest a part of the portfolio in various debt securities issued by corporate and/or State and Central Government. Such government securities may include securities which are supported by the ability to borrow from the treasury or supported only by the sovereign guarantee or of the state government or supported by Government of India/State Government in some other way. The Scheme may invest in other scheme(s) managed by the AMC or in the scheme(s) of any other mutual fund, provided it is in conformity with the investment objectives of the Scheme and in terms of the prevailing Regulations. As per the Regulations, no investment management fees will be charged for such investments.			
Plans & Options	The Scheme shall offer two plans viz. Regular Plan and Direct Plan. Direct Plan is only for investors who purchase /subscribe Units in the Scheme directly with the Fund and is not available for investors who route their investments through a Distributor and is offered in accordance with Para D of SEBI Circular no. CIR/IMD/DF/21/2012 dated September 13, 2012. Each Plan has two Options, viz., Growth Option and Dividend Option. Dividend Option has the following two facilities: i. Dividend Reinvestment facility; ii. Dividend Payout facility; Default Option: Growth Default Sub-option: Dividend Reinvestment (If the amount of Dividend payable under the Dividend Payout facility is Rs. 500/- or less, then the Dividend would be compulsorily reinvested in the option of the Scheme.)			
Minimum Amount for Purchase / Additional Purchase / Redemption	Initial Purchase – Minimum of Rs. 5000/- and in multiples of Re.1/- thereafter. Additional Purchase – Minimum of Rs. 1000/- and in multiples of Re.1/- thereafter or 100 units Repurchase / Redemption Amount – Minimum of Rs. 100/- and in multiples of Re.1/- thereafter or 0.1 unit or account balance whichever is lower.

Investment Strategy	<p>The Fund Management team endeavours to meet the investment objective of the Scheme. The Scheme shall seek opportunities in the rapidly increasing use of debt markets by corporates across the credit spectrum.</p> <p>The Fund focuses on enhancing the portfolio by identifying optimum credit opportunities in the market. The key element of this approach is having the ability to analyse and price credit risk for short dated securities. The Scheme shall be actively managed and the Fund Management team shall formulate a view of the credit quality, interest rate movement etc. by monitoring various parameters of the Corporates/Indian economy, as well as developments in global markets. Identifying attractive investment opportunities on the credit maturity spectrum may be key to the performance of this fund. The Scheme may assume moderately higher credit risk as compared to a Scheme investing predominantly in AAA bonds/sovereign securities.</p> <p>Investment views/decisions inter alia may be taken on the basis of the following parameters:</p> <ol style="list-style-type: none">Prevailing interest rate scenarioReturns offered relative to alternative investment opportunitiesQuality of the security/instrument (including the financial health of the issuer)

Various analytical tools like yield curve analysis, spreads between asset classes, horizon returns, forward implied interest rates, may be deployed to evaluate various investment options. Investments in debt instruments carry various risks like interest rate risk, liquidity risk, default risk, reinvestment risk etc. Whilst these cannot be done away with, they may be minimized by diversification and effective use of hedging techniques.</div>

Investment Strategy	<p>The objective of the Scheme is to generate regular income through investment in a portfolio comprising primarily in floating rate debt instruments (including fixed rate debt instruments swapped for floating rate returns and money market instruments). The investment strategies will focus on constructing portfolios in line with above objective.</p> <p>Investment decision will be primarily guided by fundamental research and analysis. The Scheme would be a short investment option that provides the flexibility to counter a dynamic environment by keeping its portfolio primarily in floating rate debt instruments.</p> <p>The fund manager will manage the portfolio based on the outlook on interest rates and liquidity etc. Such outlook will be developed by in-house assessment of various macro factors like economic growth, inflation, credit pick-up, liquidity and other such factors as considered relevant. Credit portfolio management will be primarily guided by external credit ratings assigned by any of the recognized credit rating agency such as CRISIL, CARE and ICRA or any other rating agency as approved by the regulators. Additionally, as may be deemed appropriate, inputs may be available from financial statement analysis, management review, industry trends, capital structure and covenant analysis to identify securities for inclusion / exclusion from credit portfolios. Efficient portfolio construction will be used to manage interest rate risk across different asset class and duration buckets, and optimise risk-adjusted returns.</p> <p>Portfolio managers will actively monitor and review markets and portfolios so that necessary rebalancing of the portfolios can be done.</p>

	<p>Presently, the scheme does not intend to invest in securitised debt and overseas / foreign securities.</p> <p>The scheme retains the flexibility to invest across all the securities in the debt and money markets instruments. The portfolio may hold cash depending on the market outlook. The fund manager may use derivative instruments as may be permitted from time to time and as may be deemed appropriate. Further, aggregate asset allocation including exposure to derivatives will not exceed 100% of the net assets; and that same security wise hedge positions would be excluded from the same.</p> <p>Investment and disclosure by the Scheme in derivatives will be in line with prevailing SEBI guidelines.</p>				
Risk Profile of the scheme	<p>Mutual Fund Units involve investment risks including the possible loss of principal. Investment in Mutual fund schemes involves certain Scheme specific Risk Factors which are summarized below:</p> <p>Investment in debt and money market instruments are subject to Interest Rate Risk, Credit Risk, Spread Risk, Liquidity Risk, Counterparty, Risk and Re-investment Risk.</p> <p>As the price / value / interest rates of the securities in which the Scheme invests fluctuates, the value of your investment in the Scheme may go up or down. The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments. Other risks include risk of mispricing or improper valuation and the inability of the derivative to correlate perfectly with underlying assets, rates and indices, illiquidity risk whereby the Scheme may not be able to sell or purchase derivative quickly enough at a fair price. For detailed risk factors, please refer to the SID.</p>				
Investment Strategy	<p>The Scheme is a medium to long-term investment option that provides the flexibility to counter a dynamic environment by actively managing its portfolio in line with the evolving interest rate scenario. The Scheme will follow an active duration management strategy. The investment strategies will focus on constructing fixed income portfolios in line with above objective. Portfolio manager will manage the fund based on the outlook on interest rates and liquidity etc. Such outlook will be developed by in-house assessment of various macro factors like economic growth, inflation, credit pick-up, liquidity and other such factors as considered relevant. Credit portfolio management will be primarily guided by external credit ratings assigned by any of the recognized credit rating agency. Additionally, as may be deemed appropriate, inputs may be available from financial statement analysis, management review, industry trends, capital structure and covenant analysis to identify securities for inclusion / exclusion from credit portfolios. Efficient portfolio construction will be used to manage interest rate risk across different asset class and duration buckets, and optimise risk-adjusted returns.</p> <p>The Scheme may use debt derivative instruments like interest rate swaps like Overnight Indexed Swaps forward rate agreements, interest rate futures or such other derivative instruments as may be permitted under the applicable regulations. Derivatives may be used for the purpose of hedging, and portfolio balancing and such other purpose as may be permitted under the regulations and guidelines from time to time. The fund manager will actively monitor and review markets and portfolios so that necessary rebalancing of the portfolios is done.</p>

Risk Profile of the scheme	Mutual Fund Units involve investment risks including the possible loss of principal. Please read the Combined Scheme Information Document carefully for details on risk factors before investment. Please refer to the Asset Allocation Pattern for Scheme Specific Risk Factors			
Investment Strategy	<p>The fund seeks to actively manage a portfolio of predominantly inflation linked bonds (IIBs) to provide an inflation adjusted return whilst maintaining a balance between liquidity and profitability of the investments. The fund manager seeks to extract value from the interplay of real and nominal interest rates. The fund would use a combination of portfolio strategies like yield curve positioning, duration, relative value positioning and other tactical strategies. All bonds typically attempt to price “inflation expectation” in the price of the bond. The inflation indexed bonds remove the uncertainty of “inflation expectation” and use the actual inflation levels to price the bonds. Therefore, these types of bonds provide a potential hedge against inflation.</p> <p>Inflation indexed bonds provide insurance to investors from inflation and cost savings for the issuer on account of reduction in coupon payments with lowering inflation rate, elimination of uncertainty risk premium, and containing inflationary expectations. The Government of India would be issuing IIBs wherein the principal is indexed to inflation and the coupon is indexed to the principal. Thus, investors receive inflation adjusted interest payments periodically and also inflation adjusted principal repayments at the time of redemption or its original par value, whichever is higher. Though, the IIBs are designed to payback the principal on maturity, similar to other bonds; the fund being a portfolio of these bonds and subject to mark to market valuation on a daily basis, would witness volatility in its NAV similar to other bond / debt funds.</p>

Investment Strategy	<p>The Scheme is a medium to long-term investment option that provides the flexibility to counter a dynamic environment by actively managing its portfolio in line with the evolving interest rate scenario. The investment strategies of the Scheme will focus on constructing a robust portfolio in line with the above objective. Under normal market conditions, majority of the portfolio of the Scheme will be invested in fixed income securities issued by corporates and/or State and Central Government across a range of maturities, while some portion will be invested in equity and equity related securities.</p> <p>The debt portfolio will be managed actively based on the AMC's outlook on interest rates and liquidity. Such outlook will be developed by in-house assessment of various macro factors like economic growth, inflation, credit pick-up, liquidity and other such factors as considered relevant. Credit portfolio management will be primarily guided by external credit ratings assigned by any of the recognized credit rating agency. Additionally, as may be deemed appropriate, inputs may be available from financial statement analysis, management review, industry trends, capital structure and covenant analysis to identify securities for inclusion / exclusion from credit portfolios. Efficient portfolio construction will be used to manage interest rate risk across different asset class and duration buckets, and optimise risk-adjusted returns. The Scheme will follow an active duration management strategy. The Scheme may use debt derivative instruments like interest rate swaps like Overnight Indexed Swaps ("OIS"), forward rate agreements, interest rate futures or such other derivative instruments as may be permitted under the applicable regulations. Derivatives may be used for the purpose of hedging, and portfolio balancing and such other purpose as may be permitted under the regulations and Guidelines from time to time.</p>			

	<p>The fund manager will select equities on a top-down and bottom-up, stock-by-stock basis, with due consideration given to price-to-earnings, price-to-book, and price-to-sales ratios, as well as growth, margins, asset returns, and cash flows, amongst others. The fund manager will use a disciplined quantitative analysis of financial operating statistics. In selecting individual investment opportunities for the portfolio, the fund manager will conduct in-house research in order to identify various investment opportunities. The company-wise analysis will focus, amongst others, on the historical and current financial condition of the company, potential value creation/unlocking of value and its impact on earnings growth, capital structure, business prospects, policy environment, strength of management, responsiveness to business conditions, product profile, brand equity, market share, competitive edge, research, technological know-how and transparency in corporate governance.
